What is Sustainable production (actually)?

To properly asses a suppliers sustainability level it is a good idea to look at these 5 indicators. It can be difficult to asses these indicators and know if a production facilitys levels are good or bad.
That is why we have made 5 simple questions to each indicator to make it more transparent to everyone.

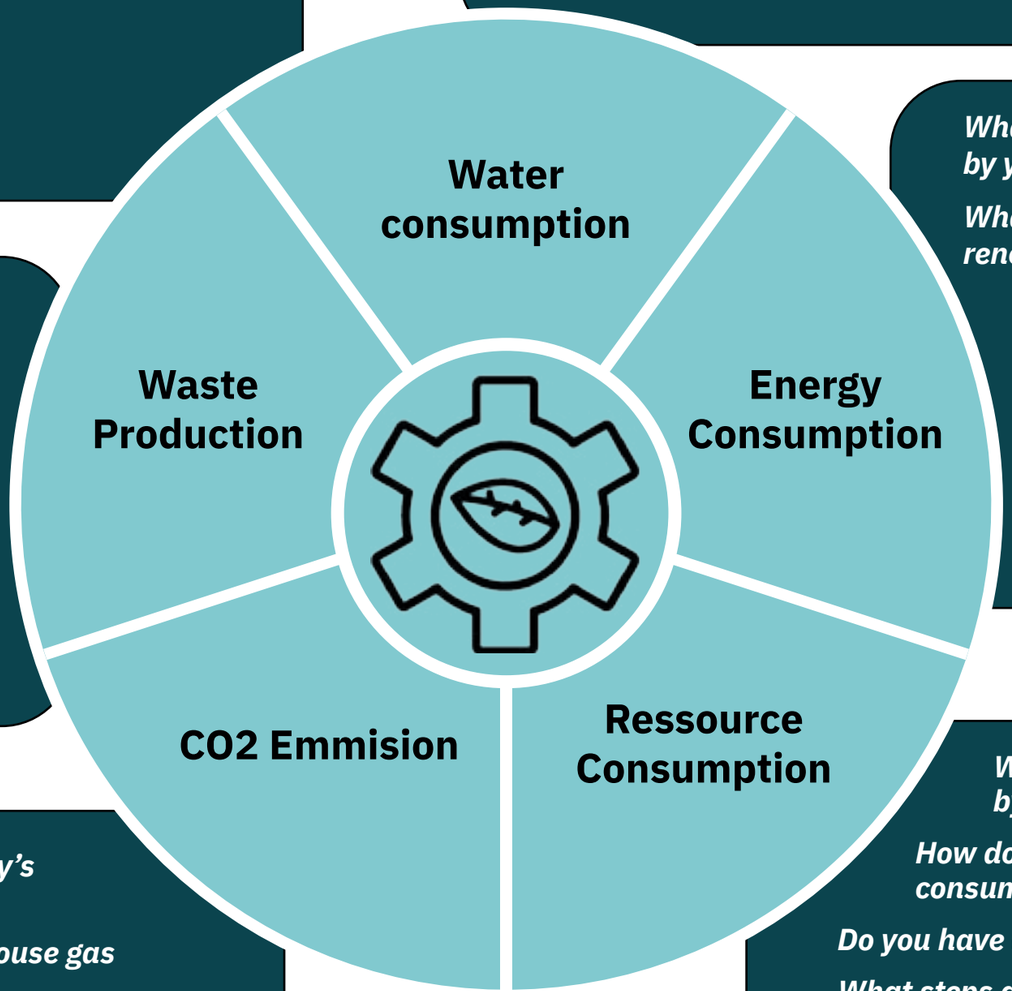
Water Consumption

Energy Consumption

Ressource Consumption

CO2 Emissions

Waste Production



How much water does your company consume annually?

Do you have systems in place for recycling or reusing water?

What measures are taken to reduce water consumption?

Are there any water-saving technologies implemented in your operations?

How do you ensure the quality of water discharged from your facilities?

What are the primary sources of energy used by your company?

What percentage of your energy comes from renewable sources?

Do you have any energy efficiency pro grams in place?

How do you monitor and manage your energy consumption?

Are there any plans to increase the use of renewable energy in the future?

How does your company manage and reduce waste production?

What percentage of your waste is recycled or reused?

Do you have any initiatives to minimize single-use materials?

Are there any waste reduction targets set for the next five years?

Do you have any hazardous waste and if so how do you handle it?

How do you measure and report your company's CO2 emissions?

What strategies are in place to reduce greenhouse gas emissions?

Do you have any carbon offset programs?

What are your long-term goals for reducing CO2 emissions?

How do you engage employees and stakeholders in your emission reduction efforts?

What are the main resources consumed by your company?

How do you track and manage resource consumption?

Do you have a resource recycling program?

What steps are taken to reduce the use of non-renewable resources?

Are there any partnerships with suppliers to promote sustainable resource use?
