How sustainable is the product and its manufacturing?

CO2-reduction and reduced consumption of resources

5	5	5	5	5	Has been implemented.
4	4	4	4	4	Decision to implement has been made.
3	3	3	3	3	The potential has been analyzed / quantified.
2	2	2	2	2	Early considerations. Potential has been identified.
1	1	1	1	1	Not started / not relevant
Product design E.g. Is the product designed to be disassembled? Can it be repaired? A modular design to allow for variations of the product?	**Materials** E.g. Have you considered how to use less materials? Recycled materials? Handling of leftover materials in production?	**Manufacturing setup** E.g. Choice of manufacturing method. Manufactured close to relevant market? Part of broader ecosystem? Data availability?	**End of life** E.g. What happens when product reaches end of life? Take-back and refurbishment possible? Recyclable? Reusable?	**Business model** E.g. Product as a service? Bundled product-service model? Circular business model?
